

Note: Assume any missing dimension.

- Q1. a) The top view of a 75mm long line measures 55mm. The line is in VP, its one end being 25mm above the HP. Draw its projections. (2 Marks)
- b) A square gasket of negligible thickness (so that it may be considered to be a flat planar surface) and of sides 30 mm each has a square cut at the centre of size 20 mm x 20 mm as shown in the figure below. Initially the gasket rests on the HP such that its edges make equal angles with the VP. Then it is tilted in a way that its surface makes an angle of  $60^\circ$  with the HP and the diagonal BD makes an angle of  $45^\circ$  with the VP, the point B being closer to VP. Draw top and front views of the gasket in the position described. (6 Marks)

- Q2. A pentagonal prism with base of sides 40mm each and height of 65mm is resting on a corner of its base on the ground with the slant edge parallel to the VP and inclined at  $45^\circ$  to the HP. Draw the front and top views. (6 Marks)

- Q3. Draw the orthographic views of the solid shown in Figure-1 in 3<sup>rd</sup> angle projection system. Put dimensions in aligned system. Arrow head in the figure shows the front direction. (8 Marks)

- Q4. Draw isometric view of the object shown by three orthographic projections shown in fig 2. (8 Marks)

Abbreviations: HP – Horizontal plane  
VP – Vertical Plane

Note: Assume any missing dimension. Draw your solutions using a pencil in the space provided.

Q1. In fig.1 orthographic views of a solid are shown. Draw the corresponding side view. (3 Marks)

Q2. Draw the isometric view of the solid object, the three orthographic views of which are given in fig. 2. Draw the view in the space provided below. (3 Marks)

Q3. Complete the views of a solid given in fig.3

Q4. Do the Corrections in the dimensions as given in fig.4 and mark them on the blank figure given (1 Marks)
